

Outgoing Edges: {1, 3, 2, 4}

Head: 2

Tail: 1

--

Head: 3

Tail: 2

--

Head: 3

Tail: 2

--

Head: 2

Tail: 1

--

Incoming Edges: {5}

Head: 4

Tail: 2

--

Vertex – 2 has **4 outgoing edges** and **1 incoming edge**. I am displaying the head and tail of the outgoing and incoming edges. For outgoing edges, the tail should always be 2 and for incoming edge, the head should always be 2. From Above output, we can see different values are returned by `getHeadOfTheEdge()` and `getTailOfTheEdge()`.
